The A655sc helps engineers, researchers, and scientists see and accurately quantify thermal patterns, leakage, dissipation, and other heat-related factors in equipment, products, and processes in real time.

**IMAGE QUALITY AND THERMAL SENSITIVITY**
FLIR A655sc is equipped with an uncooled, maintenance free, Vanadium Oxide (VoX) microbolometer detector that produces thermal images of 640 x 480 Pixels. These pixels generate crisp and clear detailed images that are easy to interpret with high accuracy. The FLIR A655sc will make temperature differences as small as 50 mK clearly visible.

**HIGH SPEED WINDOWING**
The FLIR A655sc provides 14-bit data up to 50 frames per second at full frame 640 × 480 resolution. It has a high speed windowing function that increases the output frame rate up to 200 Hz at a 640 x 120 pixel window.

**GIGE VISION™ STANDARD COMPATIBILITY**
GigE Vision allows fast image transfer using low cost standard cables up to 100 meters. With GigE Vision, hardware and software from different vendors can integrate seamlessly over gigabit ethernet connections.

**GENICAM™ PROTOCOL SUPPORT**
GenICam creates a common application programming interface (API) for cameras regardless of the interface technology or features implemented. Because the API for GenICam cameras will always be the same, cameras like the A655sc camera can be easily integrated into third party software.

**SOFTWARE**
FLIR A655sc camera works seamlessly with FLIR ResearchIR Max software enabling intuitive viewing, recording and advanced processing of the thermal data provided by the camera.

**MATHWORKS® MATLAB**
Control and capture data directly into MathWorksR Matlab software for advanced image analysis and processing.
